- ▶ From SET-PACKING problem

# Inapproximability of $P_3$ -interval number

- ▶ The  $P_3$ -interval number problem is  $O(\log n)$ -inapproximable in bipartite graphs in polynomial time unless  $P=NP$ .
- ▶ From SET COVER problem

# Inapproximability of $P_3$ -Carathéodory number

- ▶  $P_3$ -Carathéodory number problem is  $O(n^{1-\varepsilon})$ -inapproximable in bipartite graphs in polynomial time unless  $P=NP$ .
- ▶ From MAX3SAT-INTERVAL

# Geodetic convexity

- ▶ The results for hull number, Carathéodory number, interval number and convexity number can be extended to geodetic convexity

# Geodetic convexity

## Theorem

Let  $G_1$  be a triangle free graph with at least three vertices. Then

- (i)  $hn_{gd}(G_1 + K_m) = hn_{P_3}(G_1)$ ,
- (ii)  $in_{gd}(G_1 + K_m) = in_{P_3}(G_1)$ ,
- (iii)  $cX_{gd}(G_1 + K_m) = cX_{P_3}(G_1) + m$ ,
- (iv)  $cth_{gd}(G_1 + K_m) = \max\{cth_{P_3}(G_1), 2\}$ .

# Geodetic convexity

- ▶ Geodetic Radon number problem is  $O(n^{1-\epsilon})$ -inapproximable in general graphs in polynomial time unless  $P=NP$ .
- ▶ From MAXIMUM-CLIQUE problem
